令和 4 年度 第 5 学年 画像工学

課題2

E1832 藤村勇仁

2022年12月21日

1 task1

ソースコードをコード 1 に示す。また、"variance("LENNA.png");" としたとき、2289.4 が出力され、LENNA.png の画素値のヒストグラムのデータファイルが保存される。そのヒストグラムの図を、1 に示す。

コード 1 variance.m

```
1 function variance(file_name)
2
3 %
4 %variance - Specify an image name and output the pixel value variance and histogram diagram of that image.
5 %
6
7 img = imread(file_name);
8
9 var = var(vec(img));
10
11 disp(var);
12
13 hist = myhistgram(img, 0, 255, 'raw');
14 save hist.dat hist
15
16 endfunction
```

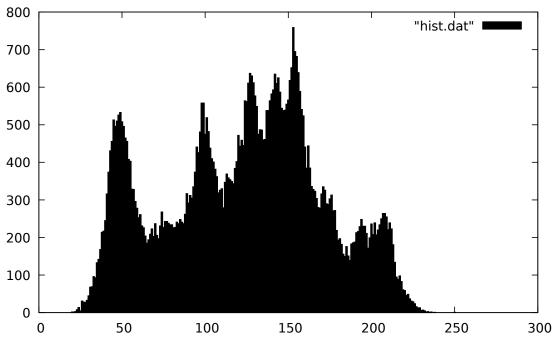

図1 1のヒストグラム

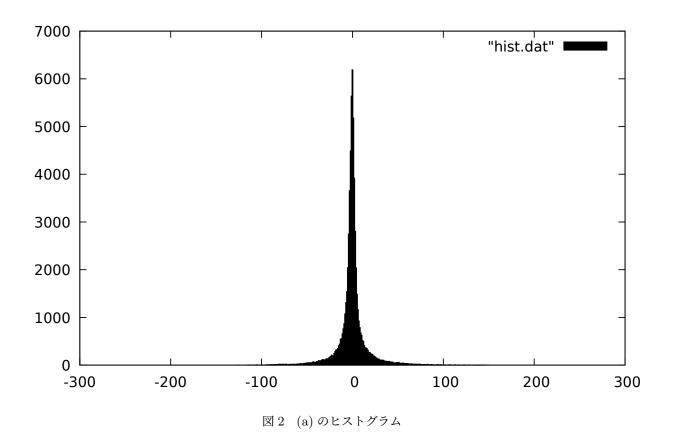

2 task2

2.1 (a)

ソースコードをコード 2 に示す。また、"line_prediction("LENNA.png");" としたとき、288.56 が出力され、LENNA.png の画素値と予測値の差のヒストグラムのデータファイルが保存される。そのヒストグラムの図を、2 に示す。

コード 2 line_prediction.m

```
1 function line_prediction(file_name)
3 %
 4 %line_prediction - Specify an image name and output the variance and histogram of the
        difference obtained from the line prediction by the left pixel value of that
       image.
5 %
 7 img = double(imread(file_name));
   [col_size row_size] = size(img);
11 pred = double(zeros(col_size, row_size));
12 diff = double(zeros(col_size, row_size));
14 for row = 1:col_size
       pred(row, 1) = img(row, 1);
16
  end
17
18 for row = 1:col_size
       for col = 2:row_size
19
           pred(row, col) = img(row, col-1);
20
       end
21
22
  end
23
24 diff = pred - img;
25
26 var = var(vec(diff));
27
  disp(var);
30 hist = myhistgram(round(diff), -255, 255, 'raw');
  save hist.dat hist
33 endfunction
```

2.2 (b)

ソースコードをコード 3 に示す。また、"plane_prediction("LENNA.png");" としたとき、165.01 が出力され、LENNA.png の画素値と予測値の差のヒストグラムのデータファイルが保存される。そのヒストグラムの図を、3 に示す。

 $\exists - F 3 \quad \text{plane_prediction.m}$

```
function plane_prediction(file_name)

function plane_prediction(file_name)

function plane_prediction(file_name)

function plane_prediction(file_name) and output the variance and histogram of the difference obtained by planar prediction using three pixel values around that image.

function plane_prediction(file_name) and output the variance and histogram of the difference obtained by planar prediction using three pixel values around that image.

function plane_prediction(file_name) and output the variance and histogram of the difference obtained by planar prediction using three pixel values around that image.

function plane_prediction(file_name) and output the variance and histogram of the difference obtained by planar prediction using three pixel values around that image.

function plane_prediction = specify an image name and output the variance and histogram of the difference obtained by planar prediction using three pixel values around that image.

function plane_prediction = specify an image name and output the variance and histogram of the difference obtained by planar prediction using three pixel values around that image.

function plane_prediction = specify an image name and output the variance and histogram of the difference obtained by planar prediction using three pixel values around that image.

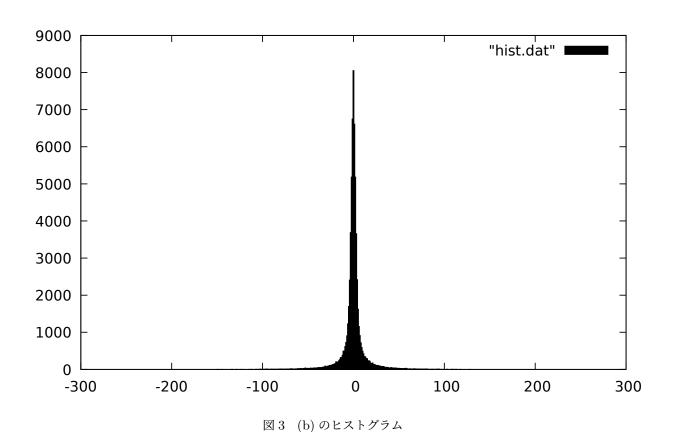

function plane_prediction = specify an image name and output the variance and histogram of the difference obtained by planar prediction using three pixel values around that image.

function plane_prediction = specify and output the variance and histogram of the difference obtained by planar prediction using three pixel values around that image.

function plane_prediction = specify and output the variance and histogram of the difference obtained by planar prediction using three pixel values around that image.

function plane_prediction = specify and output the variance and output the variance and output the variance and histogram of the pixel value and output the variance and output the variance and outp
```

```
pred(col, 1) = img(col, 1);
16 end
17 for row = 1:row_size
       pred(1, row) = img(1, row);
  end
19
20
21 for row = 2:col_size
       for col = 2:row_size
22
           pred(row, col) = img(row-1, col) + img(row, col-1) - img(row-1, col-1);
23
       end
24
25 end
26
27 diff = img - pred;
28
29 var = var(vec(diff));
30
31 disp(var);
32
33 hist = myhistgram(round(diff), -255, 255, 'raw');
34 save hist.dat hist
35
36 endfunction
```

2.3 (c)

ソースコードをコード 4 に示す。また、"average_prediction("LENNA.png");" としたとき、144.26 が出力され、LENNA.png の画素値と予測値の差のヒストグラムのデータファイルが保存される。そのヒストグラムの図を、4 に示す。

コード 4 average_prediction.m

```
1 function average_prediction(file_name)
3 %
4 %average_prediction - Specify an image name and output the variance and histogram of
       the difference obtained by average prediction using two pixel values, left and
       top of that image.
 5 %
 7 img = double(imread(file_name));
  [col_size row_size] = size(img);
11 pred = double(zeros(col_size, row_size));
12 diff = double(zeros(col_size, row_size));
14 for col = 1:col_size
      pred(col, 1) = img(col, 1);
15
16 end
17 for row = 1:row_size
      pred(1, row) = img(1, row);
19
20
21 for row = 2:col_size
       for col = 2:row_size
           pred(row, col) = (img(row-1, col) + img(row, col-1)) / 2;
23
       end
24
25 end
26
27 diff = img - pred;
28
29 var = var(vec(diff));
30
31 disp(var);
33 hist = myhistgram(round(diff), -255, 255, 'raw');
34 save hist.dat hist
36 endfunction
```
